by the District.

TRUCTION SEQUENCE:

nolish and remove existing dwelling

tall stabilized construction access pad

tall filter fabric silt fence

nstruct proposed dwellings

corporate stabilized construction pad into base for driveway

rform final grading, paving & landscaping. Uniformly apply topsoil to an ige depth of 5", minimum of 4", firmed in place.

move filter fabric silt fence.

EN COUNTY SOIL CONSERVATION DISTRICT ROSION AND SEDIMENT CONTROL NOTES:

soil erosion and sediment control practices will be installed in accordance with the standards for Soil Erosion and Contron in New Jersey (NJ Standards), and will be installed in proper sequence and maintained until permanent n is established.

y disturbed area that will be left exposed for more than thirty (30) days and not subject ction traffic shall immediately receive a temporary seeding and mulching. If the season emporary seeding, the disturbed area will be mulched with unrotted straw at a rate of 2 acre anchored by approved methods (i.e. peg and twine, mulch netting, or liquid mulch

nediately following initial disturbance or rough grading, all critical areas subject to erosion will receive a temporary combination with straw mulch or a suitable equivalent, at rate of 2 tons per acre, according to the NJ

bilization Specifications: Temporary Seeding and Mulching:

round Limestone — Applied uniformly to soil test recommendations. ertilizer – Apply 11lbs./1,000 sf of 10–20–10 or equivalent with 50% water insoluble nitrogen (unless soil test

licates otherwise) worked into the soil a minimum of 4". eed — perennial ryegrass 100 lbs./acre (2.3 lbs./1,000 sf) or other approved seeds; plant between March 1 and ay 15 or between August 15 and October 1.

lulch — Unrotted straw or hay at a rate of 70 to 90 lbs./1,000 sf applied to achieve 95% soil surface coverage. Ilch shall be anchored by approved methods (i.e. peg and twine, mulch netting, or liquid mulch binder).

Permanent Seeding and Mulching:

opsoil — A uniform applicatin to an average depth of 5", minimum of 4" firmed in place is required. round Limestone — Applied uniformly according to soil test recommendations.

ertilizer — Apply 11 lbs./1,000 sf of 10—10—10 or equivalent with 50% water insoluble nitrogen (unless a soil test licates otherwise) worked into the soil a minimum of 4".

ieed — Turf type tall fescue (blend of 3 cultivars) 350 lbs./acre (8 lbs./1,000 sf) or other approved seeds; ant between March 1 and October 1 (summer seedings require irrigation)

lulch — Unrotted straw or hay at rate of 70 to 90 lbs./1,000 sf applied to achieve 95% soil surface coverage. Ilch shall be anchored by approved methods (i.e. peg and twine, mulch netting, or liquid mulch binder).

e site shall at all times be graded and maintained such that all stormwater runoff is diverted to soil erosion and control facilities.

erosion and sediment control measures will be inspected and maintained on a regular basis, including after every

ockpiles are not to be located within 50' of a floodplain, slope, roadway or drainage facility. The base of all shall be contained by a haybale sediment barrier or silt fence.

crushed stone vehicle wheel-cleaning blanket will be installed wherever a construction access road intersects any dway. Siad blanket will be composed /2", 6 thick, will be at least 30'x100' and should be underlain with a suitable synthetic sediment filter fabric and

ximum side slopes of all exposed surfaces shall not exceed 3:1 unless otherwise approved by the District.

veway must be stabilized with 1"-2 1/2" crushed stone or sub-base prior to individual lot construction.

soil washed, dropped, spilled or tracked outside the limit of disturbance or onto public right-of-ways, will be nmediately. Paved roadways must be kept clean at all times.

atch basin inlets will be protected with an inlet filter designed in accordance with Section 28-1 of the New Jersey

orm drainage outlets will be stabilized, as required, before the discharge points become operational.

vatering operations must discharge directly into a sediment control bag other approved filter in accordance with I—1 of the New Jersey Standards.

st shall be controlled via the application of water, calcium chloride or other approved method in accordance with 5—1 oth the New Jersey Standards.

ees to remain after construction are to be protected with suitable fence installed at the drip line or beyond in accordance with Section 9–1 of the New Jersey Standards.

17. The Project Owner shall be responsible for any erosion or sedimentation that may occur below stormwater outfalls or off-site as a result of construction of the project.

18. <u>Any</u> revision to the certified Soil Erosion & Sediment Control Plan must be submitted to the District for review and approval prior to implementation in the field.

19. A copy of the certified Soil Erosion and Sediment Control Plan must be available at the project site throughout construction.

20. The Bergen County Soil Conservation District must be notified. IN WRITING, at least 48 hours prior to any land disturbance: Bergen County Soil Conservation District, 700 Kinderkamack Road, Suite 106, Oradell, New Jersey 07649. Tel: 201–261–4407; Fax: 201–261–7573.

21. The Bergen County Soil Conservation District may request additional measures to minimize on or off-site erosion problems during construction.

22. The Owner must obtain a district issued report of compliance prior to issuance of any certificate of occupancy. The District requires at least one week's notice to facilitate the scheduling of all report of compliance inspections. All site work must be completed, including temporary/permanent stabilization of all exposed areas, prior to the issuance of a compliance
